Now / Next / Later roadmap: cnftkt

Owner: Rahul | Status: Draft v1 | Built from my teardown, PRD v1 and competitor comparison

Where the items come from: My teardown of the app (four broken things) and the PRD v1 nice-to-have list. The evidence is my own use and conversations with friends, family and relatives, not survey data, so my Sureness scores are modest. The interviews will update them.

1. How I scored

Each item gets 1 to 5 for four things: People (how many users it affects), Importance (how much it matters to them), Sureness (how sure I am, based on the evidence I have) and Effort (1 easy, 5 very hard). Score = (People × Importance × Sureness) ÷ Effort. A higher score means sooner. The teardown used a simpler 1 to 5 total, and the order of the first items stays the same.

#	Item	People	Importance	Sureness	Effort	Score
1	Choose the refund after a waitlisted ticket is cancelled (PRD v1)	4	4	3	2	**24**
2	State the coupon rule clearly: at purchase, in the terms and on the claim screen	3	3	4	2	**18**
3	Make the alternate plan easier to find and understand	4	3	3	3	**12**
4	Give the main features space on the first screen, next to the ads	5	2	3	3	**10**
5	Let the coupon be used before the original train departs	3	4	2	4	**6**
6	Suggest the user's last refund choice next time	3	2	2	2	**6**
7	Tracker showing where the refund is	3	3	2	3	**6**

2. The roadmap

NOW

Choose the refund after cancellation: Users who need money right after a cancellation wait up to 7 working days. The wallet already exists, so the change is mostly a choice screen. Written up in PRD v1.

State the coupon rule clearly: Users find the lock only at checkout. Saying it upfront is cheap and does not need the rule to change.

NEXT

Make the alternate plan easier to find: It is the app's best feature and few people know it exists.

Space for main features on the first screen: Many users are affected, but ads likely bring revenue, so the fix is sharing the space, not removing ads.

LATER

Let the coupon be used early: It would fix the lock itself, but I do not yet know why the rule exists, so I am unsure and the effort may be high.

Suggest the last refund choice: A nice extra once the choice screen exists.

Refund tracker: Useful, but only after the choice screen proves people want it.

3. What I'd do first

I'd start with the refund choice after cancellation, because it hurts users at the worst moment and is the cheapest to build. In the same release I'd say the coupon rule clearly, since that is a text change and not a rule change. The coupon rule itself waits until I understand why it exists.

4. What I'd want to learn before committing to the rest

- How fast a wallet withdrawal to the bank is, and whether it has charges.
- Why the coupon can only be used after the original train departs.
- How many users face each problem, from the 5 interviews and, if I could, the app's own data.
- How much money the first-screen ads bring in, to see how much space can be shared.

This draft has 7 items. The kit suggests 8 to 10, so I will add more after the interviews.
